

Board of Education Candidates Disability Questionnaire 2026**Candidate: Claudia Peralta****District: 1b****Question 1:**

In no more than a paragraph, introduce yourself and why you are running to serve on the Board of Education.

Answer:

My name is Claudia Peralta, and I am a parent, community advocate, and candidate for the Chicago Board of Education representing District 1-B. I am running because I believe every child deserves a strong neighborhood school where they are known, supported, and given the opportunity to succeed. As a parent and community member, I have seen how deeply our schools shape the lives of children and families, and I believe our elected school board must be accountable to the communities it serves. I am running to be a strong voice for students and families, strengthen our neighborhood schools, and ensure every student—including students with disabilities—has the resources, services, and opportunities they need to fully participate and succeed.

Question 2:

Many families of students with disabilities talk about the challenges they face trying to navigate the special education system in CPS. Why do you think families are so frustrated?

Answer:

I think families are frustrated because they are too often forced to become their own advocates and experts just to make sure their children receive the services and supports they are already entitled to. When families are struggling to get an IEP implemented, find appropriate services, access accommodations, or communicate with school staff, the burden should not fall on them to navigate a complicated system on their own. Families also experience frustration when staffing shortages, inconsistent communication, and a lack of transparency make it difficult to know whether their child's needs are being met. We need a system where families are treated as partners, their concerns are taken seriously, and CPS is accountable for delivering the services each student needs to succeed.

Background

Currently, over 60% of CPS schools are not fully ADA accessible. In practice, this means that “neighborhood schools” are not an option for many students with physical disabilities, let alone disabled

teachers, disabled parents, disabled voters, or other disabled community members visiting our schools. The 2023 CPS Facilities Master Plan identifies building accessibility as an important priority, but the district has not adopted a roadmap or plan to achieve better building accessibility.

Question 3:

What steps should the district take to address a lack of accessibility in its buildings?

Answer:

CPS needs a clear, publicly accountable roadmap to make every school accessible, not just a commitment to address accessibility over time. The district should begin by publishing a school-by-school assessment of accessibility needs, establishing clear timelines and cost estimates for bringing buildings into compliance, and making accessibility a required priority in every capital planning cycle. As a Board member, I would push for dedicated funding for accessibility improvements, regular public reporting on progress, and meaningful input from students with disabilities, families, educators, and disability advocates when determining priorities. A neighborhood school cannot truly be a neighborhood school if a student, parent, teacher, or community member cannot enter and fully participate in that school. Accessibility must be treated as a basic requirement of our public schools, not a project that gets addressed only when funding is available.

Background:

A core tenet of The Federal Individuals with Disabilities Education Act is “the right to a free and appropriate public education in the [least restrictive environment](#).”

Despite this, CPS has a history of separating students with disabilities from their peers instead of including them in general education classrooms. A [1998 court settlement](#) (Corey H.) required CPS to move toward *inclusion*, meaning students with disabilities should be taught alongside their non-disabled peers whenever they can make meaningful progress that way, rather than being placed in separate, more restrictive settings.

Since 2023, the number of "cluster classrooms" (separate, self-contained classrooms specifically for students with disabilities, apart from general education) has increased by over 250%.

Question 4:

As a board member, what questions would you ask to understand why the district is placing so many more students in these separate classrooms instead of general education settings?

Answer:

Given CPS's history, including the Corey H. settlement, I would ask why we are seeing such a significant increase in cluster classrooms and whether that increase reflects students' individual needs or

shortcomings in the district's ability to provide inclusive supports. Specifically: How many students have been placed in cluster classrooms since 2023, and what were the reasons for those placement decisions? Are students being placed in these settings based on their individualized IEPs and meaningful input from their families, as CPS policy requires? Are staffing shortages, limited related services, inaccessible buildings, or other capacity constraints influencing placement decisions, even though CPS policy says those factors should not determine LRE? For students already in cluster classrooms, how often are their placements reviewed and are they receiving meaningful opportunities to participate with their general education peers? Finally, what is CPS doing to ensure that the lessons of Corey H.—which found that students with disabilities were being placed in separate and unequal environments—are not being repeated today?

Question 5:

In your opinion, what are the pros and cons of expanding cluster programming for students?

Answer:

The pros of cluster programming are that it can provide more specialized instruction, smaller-group learning, consistent supports, and concentrated access to special education staff and related services. For some students with significant or complex needs, a cluster classroom may be the most appropriate environment for making meaningful educational progress.

The cons are that separate classrooms can reduce opportunities for students with disabilities to learn and socialize alongside nondisabled peers, participate in the broader school community, and access the general education curriculum. There is also a risk that cluster placements expand because of CPS staffing or resource limitations rather than a student's individual needs. The key issue is whether cluster programming is being used because it is the right placement for a particular student or because the district lacks the capacity to provide appropriate supports in a less restrictive environment.

Background

Federal law allows certain students with intellectual disabilities to stay in school until they are 22. Ages 18-22 are known as the *transition years* where students focus on employment and independent living skills. Many students and families fear the “[disability cliff](#),” or lack of resources and career support that comes when students age out of the school system at the age of 22.

Question 6:

What can be done to ensure students with disabilities are well equipped for success in their career and lives after graduation?

Answer:

Students with disabilities should leave CPS with a meaningful plan for what comes next, not face a cliff when their school-based services end. Transition planning should begin early and be individualized

around each student's strengths, interests, and goals, with families and students meaningfully involved in the process. CPS should expand access to paid and supported work experiences, career and technical education, college and postsecondary opportunities, independent living and self-advocacy skills, transportation and community-based instruction, and connections to adult service providers before students graduate. The district should also strengthen partnerships with employers, community organizations, colleges, and agencies that can provide support after a student leaves CPS. As a Board member, I would push for clear measures of transition success and greater transparency about whether students are actually connecting to employment, postsecondary education, independent living, and other opportunities after graduation. Preparing students for life after CPS should be part of their education from the beginning, not something we address when they are about to age out.

Background

According to the 2024-25 [Illinois State Report Card](#), 42% of CPS students overall were proficient in English language arts and 27% in math on the state test. Among students with IEPs (formal plans for students with disabilities), only 10.5% were proficient in ELA and 7.1% in math.

Question 7:

What is your top priority for improving educational outcomes for students with disabilities in CPS?

Answer:

My top priority would be ensuring that every student with a disability has access to high-quality, individualized instruction and the supports necessary to make meaningful academic progress. The gap in outcomes for students with IEPs is unacceptable, and improving it requires more than focusing on test scores after the fact. CPS must ensure that IEPs are implemented consistently, schools have enough special education teachers and related-service providers, students have access to appropriate grade-level curriculum and instructional materials, and educators have the training and resources to meet different learning needs. I would also want the district to use academic data alongside information from students, families, and educators to identify where students are struggling and direct resources where they are most needed. As a Board member, I would make closing these opportunity and achievement gaps a priority and hold CPS accountable for demonstrating that the supports it provides are actually translating into stronger outcomes for students with disabilities.
